

Trees, Lace and Waves Instructions

1. Reference marks are on the templates to help you advance to the next row. These marks should be at the bottom of the template, closest to you when standing at the back of your frame.

2. When you are ready to Advance your quilt, move the stylus to the bottom reference point

Make sure your needle is in the UP not DOWN position to prevent from ripping your quilt.

3. Advance your quilt until the needle is directly on the Top Point of your design. See Figures 1-3. This top row now marks the bottom row of a whole new session.

4. As you tighten the quilt, adjust it so your needle is directly on the Top Point. Tighten to the SAME tension you had before the move. Working tighter or looser will change the size of the finished row.

5. Once you have tightened your quilt, put your stylus in the next reference point (2). Your needle should be in the next Top Point (2). Continue doing these checks until you have checked the whole template.

6. Once you have checked your whole template, go to the beginning, make a securing stitch and start quilting.

7. Quilt Away!
